Sepro_{srl}

“Day after day the environment in which we live is being filled
with the waste we produce”

About us

Working as a team,
sharing objectives
creating synergies from resources.

Sepro srl was established in May 1997. The Company bases its professionalism on the experience and know-how gained over many years working directly in the environment sector. Sepro srl has considerable experience in various specific areas of the ecologic and industrial sector, waste water treatment plants, controlled landfills, composting plants, industrial decontamination and maintenance, provisional storage plants, cement-asbestos and asbestos removal, transport and logistic organisations. All of this makes Sepro a stable, competent, responsible and reliable Company, and a Company you can contact to entrust the management of a delicate and fundamental aspect of your Company.

Developing together to consolidate and to stand out

The persons that operate and work within Sepro have developed their skills and expertise in specific working environments. The first involvement with environment-related problems dates back to 1982; from then the team members have gained their experience by managing authorised landfills, water treatment plants, recovery plants, storage plants, industrial and environmental clean-up projects, clean-up projects for areas contaminated by asbestos and cement-asbestos.

Sepro_{srl}

About us

Creating solutions

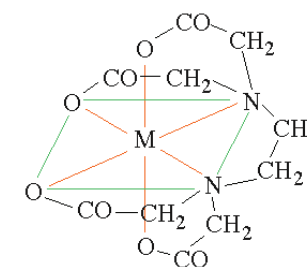

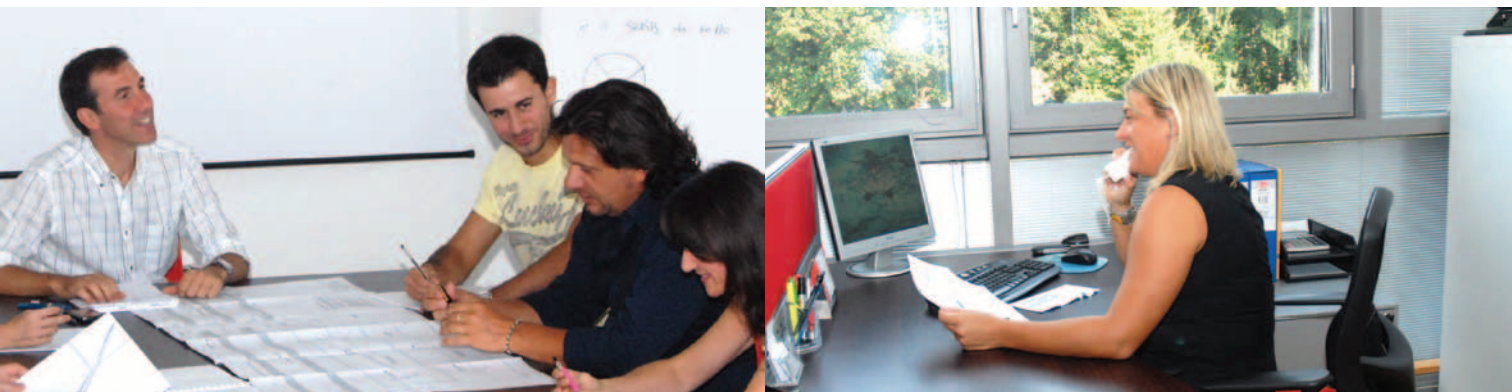

The new reference framework legislation, and the legislator's work to continuously improve the legislation in place, require the producers, carriers and operators of treatment/disposal plants to change their mutual relationships continuously. Sepro intends to be the reference point for the various players involved in the waste materials supply chain, by using the specific features of the service the Company can provide.

ISO 9001 certification

In a special period being experienced by the waste materials sector, Sepro has decided to focus on obtaining the certification of its company management system, to continue to offer its customers global solutions with more and more clarity and consistency.

Our technical and operating staff is updated constantly in the environmental and safety field through their direct involvement in special training programmes.

Septo srl

Our services

If you expect a great deal from ourselves, you need to have greater demands

Sepro offers its customers a complete range of services. The needs of industries, as well as the increasingly stronger respect for the environment that surrounds us and for the persons who will come into contact with the environment in future years, lead to an on-going development in the ecological and environmental sector. Sepro has therefore prepared a services charter, a unilateral document that establishes the characteristics of the services provided in quantitative and qualitative terms.

The benefits you will enjoy by selecting our services

- TRAINED OPERATORS
- A DIVERSIFIED NETWORK OF AUTHORISED PLANTS
- INFORMATION MATERIAL FOCUSING ON ENVIRONMENTAL TOPICS
- PRELIMINARY VERIFICATION OF THE WASTE MANAGEMENT CYCLE

Sepro_{srl}

- Surface and subsurface surveys
- Safety implementation operations
- Environmental characterisation
- Preparing clean-up projects
- Operations to clean-up contaminated areas
- Asbestos risk census, monitoring,
- Decontaminating structures containing asbestos
- Collection, transport, treatment, recovery, disposal of special waste materials.

Our services

Sepro's services are integrated by a network of selected suppliers. In this way the customer can always be sure in terms of the timing and methods applied.

Sepro srl

Real attention is paid to your recommendations

Your opinions are considered directly by the Company's management.

What we promise

Every proposal for transport, recovery or disposal services is assessed by considering the authorisation possibilities, plant capacities, the operator's professionalism and expertise. An **audit** can be organised at the receiver plant, subject to a minimum advance payment. Updates concerning environment-related legislation are on-going and rigorous. Our commercial proposals are and will represent a summary of what the market offers at that date for that given type of waste. Significant changes are notified immediately to the customer/producer.

"The ability to look to the future has helped us create extraordinary and cutting-edge solutions"

Sepro srl

Waste management

Numerous operations, a single project: managing the human and environmental factor

Sepro works for you and for the environment; we look for the best solution everyday, to reduce the impact of your production activities on the environment. A mission that always leads us to use the best technologies available on the market, translating heat efficiency into economic saving.

More than 300 customers throughout Italy have chosen Sepro to find a solution to their environmental problems over the past 10 years.

27.239.042
kg of waste materials managed

including:

6.125.017
liquids

11.459.470
mud slurries

8.307.145
solids

1.347.410
powdery products

Sepro srl

Preparing the commercial proposal

A representative sample of the waste to be disposed of is requested after a visit by our technical and commercial personnel. Any special needs are also acknowledged on this occasion, for example: the type of vehicle required or other special aspects. The sample is analysed to indicate the plant that is authorised to accept the waste if not available, in accordance with applicable legislation. The commercial proposal is prepared on this basis and, if accepted, becomes an order.

Sepro srl

Disposal and recovery operations

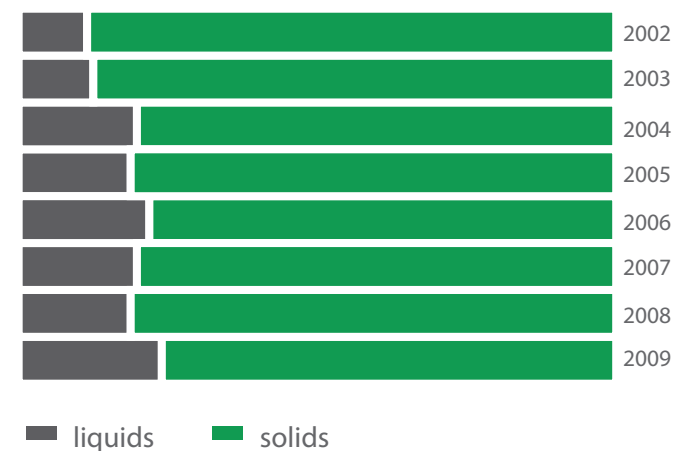

- D01 storage on or in the ground.
- D02 treatment in land-based environment.
- D03 in-depth injections.
- D04 lagoon treatment.
- D05 specially prepared landfill.
- D06 solid waste discharge in water environment except by immersion.
- D07 immersion, including burial in mannose subsoil.
- D08 biological treatment not specified elsewhere in this annex that produces composts or mixtures which are eliminated, in compliance with one of the procedures listed from points D1 to D12.
- D09 chemical and physical treatment not specified elsewhere in this annex that produces compost or mixtures eliminated in compliance with one of the procedures listed in points from D1 to D12.
- D10 ground level incineration.
- D11 incineration at sea.
- D12 permanent deposit.
- D13 preliminary grouping before one of the operations outlined in points from D1 to D12.
- D14 preliminary reconditioning before one of the operations outlined in points from D1 to D14.
- D15 preliminary storage before one operation outlined from points D1 to D14.

- R01 principal use as fuel or as another means to produce energy.
- R02 solvents regeneration/recovery.
- R03 recycle/recovery of organic substances not used as solvents.
- R04 recycle/recovery of metals and metal compounds.
- R05 recycle/recovery of other inorganic substances.
- R06 regeneration of acids or bases.
- R07 recovery of products used to capture pollutants.
- R08 recovery of products originating from catalytic converters.
- R09 regeneration or other reuses of oils.
- R10 spreading over the ground to benefit agriculture or ecology.
- R11 use of waste materials obtained from one of the operations indicated from R1 to R10.
- R12 waste exchange to subject the waste to one of the operations indicated from R10 to R11.
- R13 storing waste materials to subject the waste to one of the operations indicated in points from R1 to R12.

Distribution by type of waste managed

Implementation of safety measures

Sepro manages and coordinates a team of specialists able to intervene rapidly using technologies and expertise

When emergency situations arise, the operations to be performed to implement safety measures in the area are organised jointly with the authorities designated to carry out inspections. A working plan is prepared indicating the potential risks, the operating procedures and an estimate of the materials to be transferred for disposal. The operating personnel are informed of all the aspects involved in the operation to be performed before they intervene. One of the Company's Managers is always present at the site, to monitor the operations and to coordinate the various operating teams. Photographic surveys are made and samples are taken to document the operations performed. The need for a clean-up operation is assessed after the emergency has ended.

Sepro srl

Environmental clean-up operations

Sepro srl

Sepro manages the clean-up operations by preparing all the documentation necessary and completing the formalities on behalf of the customer. The best technology is agreed with the inspection authorities, to restore the site within the parameters established by law.

The operation is described in detail in the clean-up plan prepared and is submitted for preliminary approval by the authorities and by the customer. All the phases described in the document are carried out, as well as collecting the samples of material to be transferred for disposal.

Where we operate

Sepro operates mainly in Northern Italy, due to the Company's geographical position. The main customers are located in the following Regions: Veneto, Trentino-Alto Adige, Friuli-Venezia Giulia (Triveneto), Emilia Romagna and Lombardy. However, there are major companies which entrust Sepro with their waste management requirements and they have plants located in Central-South Italy.

Sepro_{srl}

Cross-border waste material shipments

EC Regulation No. 1013/2006
as subsequently amended and supplemented

Road and/or intermodal transport.

Shipping waste materials classified in orange list and red list.

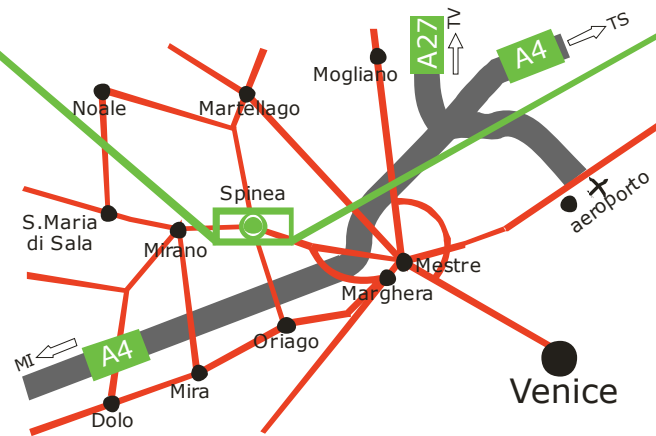

Sepro manages the shipments of waste materials to other countries, and prepares the complete authorisation formalities and manages the approval process if the producer submits a notification. Sepro provides assistance with the formalities to establish the guarantees in favour of the Ministry of the environment, in accordance with Ministerial Decree (D.M.) No. 370/98.

Sepro assumes the role of direct notifier. The Company provides consultancy services and complete assistance in all phases, from the agreement with the foreign receiver plant, to the inspections based on the protocol of understanding between the Authority, Region and the Supervisory Body.
